Death certificate No.

## Hp-4

This patient, an eighteen year old white female, had a history of Cushing's Syndrome since 1941. Her admission in October 1945 was the fifth period of hospitalization. Chief complaints on this occasion were referable to hypertension and osteoporosis. The clinical diagnoses were basophile adenoma of the pituitary gland with hypertension, hypertensive heart disease, nephropathy with uremia, osteoporosis, and a staphylococcic infection of the urinary tract. The patient ran a down hill course until death in uremia occurred in April 1947. Diagnoses at autopsy included basophile adenoma of the pituitary gland, atrophy of the thyroid gland, hypertrophy of the adrenals, hypertrophy of the left ventricle, hypoplasia of the uterus and ovaries, osteoporosis of the spine and pelvis, and chronic nephritis.
